Summary

Senior Software Engineer focused on backend and data platform engineering. At Yandex, I build internal services for deploying and operating 200+ production processes. Shipped in-service JobGraph compilation that cut job startup time by **70%**, improving release-time predictability for 150+ production jobs. I own production systems end-to-end: design, implementation, CI/CD, observability, and on-call, and I help drive instrumentation efforts to make delivery bottlenecks measurable. Interested in distributed systems and developer platform tooling; open-source contributor in my spare time.

Employment History

May 2023 –

Yandex, Senior Software Engineer

Junior (May 2023) → Senior (Feb 2026)

Internal platform for data engineers: deploy and operate 200+ production processes.

Stack: Flink, ZooKeeper, Spring Boot, PostgreSQL, jOOQ, Liquibase.

- Designed and shipped in-service JobGraph compilation, reducing job startup time by **70%**; adopted by 150+ production jobs and improved release-time predictability.
- Built and optimized a substantial part of CI/CD for clusters and jobs: reduced test time by **60%**, release time by **40%**, and decreased engineering wait time for safe delivery.
- Built an IntelliJ IDEA plugin from scratch to automate routine actions for data engineers and improve productivity on the platform.
- Contributed to defining release-flow observability requirements to make platform impact measurable across teams.
- Mentored an intern to a full-time role; onboarded a junior engineer.

December 2021 – May 2023

Sber, Junior Software Engineer

Products for cash circulation support (cash collection forecasting). Migrated services to the internal cloud (OpenStack) and developed integration logic. Technologies: Git, Atlassian stack (Jira, Confluence, Bitbucket), Java, Spring.

August 2021 – December 2021

VBC, Intern Java Developer

Worked in a microservices architecture (Netflix stack): implemented complex business logic and optimized PostgreSQL interactions. Developed a flexible credit pricing service that accounts for company/individual history, bank rules, limits, and requirements.

Skills

Languages	English (B2), Russian (native).
Programming	Java, Kotlin, Python.
Databases	PostgreSQL, Redis, MongoDB.
Frameworks & Tools	Spring Boot, Apache Flink, Docker, Kubernetes, Django, React, Svelte.

Education

September 2024 –	M.Sc. Higher School of Economics, Faculty of Computer Science, Artificial Intelligence
September 2020 – July 2024	B.Sc. Higher School of Economics, Faculty of Computer Science, Software Engineering GPA: 8.28 Top 9% of cohort Relevant coursework: Software Architecture, Distributed Systems, Algorithms, Software Engineering, Web Development, Backend Development

Awards

2020	2nd degree diploma , Lomonosov Olympiad in Mathematics (MSU) 2nd degree diploma , Open Olympiad in Informatics (ITMO University)
2019	3rd degree diploma , Rosatom Olympiad in Mathematics (NRNU MEPhI)

Open Source Projects

Java, Minecraft mod	PacketPray - Minecraft mod that mitigates crash scenarios related to network packets; 2.5M+ downloads on CurseForge.
Svelte/Go, Wishlist app	Wili - full-stack wishlist app with sharing, Telegram Mini App integration, and Yandex ID auth. SvelteKit + TypeScript frontend, Go microservices backend (PostgreSQL, MongoDB). Deployed to Yandex Cloud via GitHub Actions.
Java, Validation library	ClinQ - LINQ-inspired validation library providing fluent method chains, mappings, dependency checks, and reusable validators.
Python, Similar Developers Search	SimDevSearch - pipeline that processes GitHub repositories to find developers with similar coding and commit styles using cosine similarity.
Svelte, Personal page	theseems.ru - personal website showcasing background and pet projects .
