Summary

Senior Software Engineer who advanced from Junior to Senior in under 2 years at Yandex. Focused on backend and data platform engineering with end-to-end ownership: design, implementation, CI/CD, observability, and on-call. Track record of shipping high-impact optimizations across build, release, and runtime pipelines. Interested in distributed systems and developer platform tooling; open-source contributor in spare time.

Experience

Yandex

Senior Software Engineer (Junior → Senior)

May 2023 – Present

Moscow, Russia

- Designed and shipped in-service JobGraph compilation for a platform serving 200+ production Flink processes, reducing job startup time by **70%** and improving release-time predictability for 150+ jobs.
- Built and maintained core CI/CD pipelines for clusters and jobs: cut test execution time by **60%** and release time by **40%**.
- Built an IntelliJ IDEA plugin from scratch to automate routine workflows for data engineers, improving daily productivity on the platform.
- Key contributor to open-source **FLYT** (Flink over YTsaurus): built the FLYT Python launcher, data-metrics module, and contributed to core connector development.
- Mentored an intern to a full-time role; onboarded and ramped up a junior engineer.

Sber

Junior Software Engineer

Dec. 2021 – May 2023

Moscow, Russia

- Migrated cash-collection forecasting services to an internal OpenStack cloud; designed and implemented cross-service integration logic.

VBC

Intern Java Developer

Aug. 2021 – Dec. 2021

Moscow, Russia

- Developed a credit pricing service accounting for company/individual history, bank rules, limits, and regulatory requirements.
- Optimized PostgreSQL query performance within a microservices architecture (Netflix OSS stack).

Technical Skills

Languages: Java, Kotlin, Python

Spoken: English (B2), Russian (Native)

Databases: PostgreSQL, Redis, MongoDB

Frameworks: Spring Boot, Apache Flink, jOOQ, Liquibase, Django, React, Svelte

Infrastructure: Docker, Kubernetes, Linux, ZooKeeper, GitHub Actions

Open Source Projects

YTsaurus FLYT | Python, Java, Apache Flink

- Key contributor to FLYT (Flink over YTsaurus); built the FLYT Python launcher from scratch (CLI, profiles, SquashFS layers, jobshell, CI) and the data-metrics module for timestamp-based sink metrics.

PacketPray | Java, Minecraft mod

- Minecraft mod that mitigates crash scenarios related to network packets; 2.5M+ downloads on CurseForge.

Wili | Svelte, Go

- Full-stack wishlist app with sharing, Telegram Mini App integration, and Yandex ID auth. SvelteKit + TypeScript frontend, Go microservices backend. Deployed to Yandex Cloud via GitHub Actions.

ClinQ | Java

- LINQ-inspired validation library providing fluent method chains, mappings, dependency checks, and reusable validators.

Education

Higher School of Economics (HSE University)

M.Sc. in Artificial Intelligence (Faculty of Computer Science)

Sep. 2024 – Present

Moscow, Russia

Higher School of Economics (HSE University)

B.Sc. in Software Engineering (Faculty of Computer Science)

Sep. 2020 – Jul. 2024

Moscow, Russia

- GPA: 8.28; Top 9% of cohort.

Awards

2nd degree diploma, Lomonosov Olympiad in Mathematics (MSU), 2020

2nd degree diploma, Open Olympiad in Informatics (ITMO University), 2020

3rd degree diploma, Rosatom Olympiad in Mathematics (NRNU MEPhI), 2019
